

**Purpose**

This document provides you with key information about this investment product. It is not marketing material. The information is required by law to help you understand the nature, risks, costs, potential gains and losses of this product and to help you compare it with other products.

CFDs on a FX are offered by **CAPSTOCK LTD** (“CAPSTOCK”), a company registered in Mauritius, number C12109509. Capstock Ltd is authorised and regulated by the Financial Services Commission in the Republic of Mauritius, register number C112010791. Call 268 1406 or go to [www.capstock.mu](http://www.capstock.mu) for more information.

This document was last updated on 12 December 2017.

**You are about to purchase a product that is not simple and may be difficult to understand.**

**What is this product?****Type**

A contract for difference (“CFD”) is a leveraged contract entered into with CAPSTOCK on a bilateral basis. It allows an investor to speculate on rising or falling prices for an underlying FX pair. FX is always traded in pairs, and trading a CFD on an FX pair involves the simultaneous buying and selling of two different currencies. An FX pair quote will show both currencies, e.g. EUR/GBP, the first currency (EUR) is known as the base currency and the second (GBP) is known as the variable currency.

FX trading gives an investor the choice to buy (or go “long”) the currency pair if they think the price of the base currency will rise in relation to the variable currency, or alternatively to sell (or go “short”) the currency pair if they think that the price of the variable currency will rise in relation to the base currency.

For instance, if an investor is long on EUR/GBP with a CFD and the price of the underlying FX pair rises, the value of the CFD will increase - at the end of the contract CAPSTOCK will pay the difference between the closing value of the contract and the opening value of the contract. Conversely, if an investor is long and the spot price of the underlying FX pair falls, the value of the CFD will decrease - at the end of the contract they will pay CAPSTOCK the difference between the closing value of the contract and the opening value of the contract. The leverage embedded within all CFDs has the effect of magnifying both profits and losses.

The current (“spot”) prices we offer to you are derived from prices sourced from major liquidity providers to the OTC FX and bullion market. The forward (“future”) prices we offer to you are derived from underlying on-exchange Futures price data.

**Objectives**

The objective of the CFD is to allow an investor to gain leveraged exposure to the movement in the value of the underlying FX pair (whether up or down), without actually needing to buy or sell the underlying FX pair. The exposure is leveraged since the CFD only requires a small proportion of the notional value of the contract to be put down upfront as initial margin and is one of the key features of trading CFDs.

By way of example, EUR/GBP is trading at 0.8495 / 0.8496, and for the margin calculation the mid-price of 0.84955 will be used. If an investor buys 50,000 EUR with an initial margin amount of 0.2%, the initial investment will be £84.96 ( $0.002 \times 50,000 \times 0.84955$ ), which demonstrates the effect of leverage of, in this case 500:1 ( $1 / 0.002$ ). This means that for each 1 point change (to the fourth decimal place, here 0.84955) in the price of the underlying FX pair so the value of the CFD changes by £5. For instance, if the investor is long and the market increases in value, a £5 profit will be made for every 1 point increase in that market. However if the market decreases in value, a £5 loss will be incurred for each point the market decreases in value. Conversely, if an investor holds a short position, a profit is made in line with any decreases in that market, and a loss for any increases in the market.

The spot CFD contract does not have a pre-defined maturity date and is therefore open-ended. An overnight Holding Cost will be charged each night the position is held. There is no recommended holding period and it is down to the discretion of each individual investor to determine the most appropriate holding period based on their own individual trading strategy and objectives. Failure to deposit additional funds in the case of negative price movement may result in the CFD being auto-closed. This will occur when there is not enough funds in the account to cover losses and the margin required. CAPSTOCK also retains the ability to unilaterally terminate any CFD contract where it deems that the terms of the contract have been breached.

In the case of FX future CFDs, investors will be given the option to roll their existing contract into the next period – i.e., from a January expiry into a March expiry. Rolling is at the discretion of the investor but failure to do so will result in the CFD being auto-closed at the expiry date.

## Intended Retail Investor

CFDs are intended for investors who have knowledge of, or experience with, leveraged products. Likely investors will understand how the prices of CFDs are derived, the key concepts of margin and leverage, and that losses may exceed deposits. They will understand the risk/reward profile of the product compared to traditional share dealing, and desire short-term, high-risk exposure to an underlying asset. Investors will also have appropriate financial means, hold other investment types and have the ability to bear losses in excess of the initial amount invested.

## What are the risks and what could I get in return?

### Risk indicator

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this product as 7 out of 7, which is the highest risk class. This rates the potential losses from future performance of the product at a very high level.

CFDs are leveraged products that, due to underlying market movement, can generate losses rapidly. Losses can exceed the amount invested and you may be required to deposit additional funds. There is no capital protection against market risk, credit risk or liquidity risk. **Be aware of currency risk.** Your profit and loss for an FX pair is always determined in the variable currency so when you buy or sell CFDs on an FX pair in a variable currency different to the currency of your trading account, there will be a currency conversion. The final return you may get depends on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.

In some circumstances, you may be required to make further payments to pay for losses. **The total loss you may incur may significantly exceed the amount invested.**

Market conditions may mean that your CFD trade on an FX pair is closed at less favourable price, which could significantly impact how much you get back. We may close your open CFD contract if you do not maintain the minimum margin that is required, if you are in debt to the company, or if you contravene market regulations. This process may be automated. This product does not include any protection from future market performance so you could lose some or all of your investment. If we are not able to pay you what is owed, you could lose your entire investment. However, you may benefit from a consumer protection scheme (see “what happens if we are unable to

### Performance scenarios

The scenarios shown illustrate how your investment could perform, but are not an exact indicator. You can compare them with the scenarios of other products. The scenarios presented are an estimate of future performance based on evidence from the past on how the value of this investment varies. What you get will vary depending on how the market performs and how long you hold the CFD. The stress scenario shows what you might get back in extreme market circumstances, and it does not take into account the situation where we are not able to pay you.

The following assumptions have been used to create the scenarios for FX pair A/B in Table 1:

FX pair CFD (held intraday)		
FX pair opening price (A/B):	P	0,7500.0
Trade size (Units):	TS	10,000
Margin %:	M	1
Margin Requirement (B):	$MR = P \times TS \times M$	75
Notional value of the trade (A):	$TN = MR/M$	7500

Table 1

LONG Performance scenario	Closing price	Price change	Profit/loss	SHORT Performance scenario	Closing price	Price change	Profit/loss
Favourable	0,7627.5	1.7%	B127.5	Favourable	0,7372.5	-1.7%	B127.5
Moderate	0,7605.0	1.4%	B105.0	Moderate	0,7387.5	-1.5%	B112.5

Unfavourable	0,7372.5	-1.7%	-B127.5	Unfavourable	0,7627.5	1.7%	-B127.5
Stress	0,7132.5	-4.9%	-B367.5	Stress	0,7860.0	4.8%	-B360.0

The performance figures above do not include the costs shown below. If you have been sold this product by someone else, or have a third party advising you about this product, these figures do not include any cost that you pay to them. The figures do not take into account your personal tax situation, which may also affect how much you get back.

### What happens if CAPSTOCK is unable to pay out?

If Capstock is unable to meet its financial obligations to you, you may lose the value of your investment. However Capstock segregates all retail client funds from its own money in accordance with the Mauritius FSC's Client Asset rules.

### What are the costs?

Trading a CFD on an underlying FX pair incurs the following costs:

This table shows the different types of cost categories and their meaning			
Spot (undated) & Forward	One-off entry and exit costs	Spread	The difference between the buy price and the sell price is called the spread. This cost is realised each time you open and close a trade.
		Currency conversion	Any cash, realised profit and losses, adjustments, fees and charges that are denominated in a currency other than the base currency of your account, will be converted to the base currency of your account and a currency conversion fee will be charged to your account.
Spot (undated) & Forward	Ongoing costs	Daily holding cost	An interest rate is generated every night your position is held. This could be a credit or a debit depending on the currency pair you are trading and the percentage will apply to the national value of the trade.

### How long should I hold it and can I take money out early?

CFDs are intended for short-term trading, in some cases intraday, and are generally not suitable for long-term investments. There is no recommended holding period, no cancellation period and therefore no cancellation fees. You can open and close a CFD on an FX pair at any time during market hours.

### How can I complain?

If you wish to make a complaint, you should contact our Client Management Team on 268 1406, by emailing [trading@capstock.mu](mailto:trading@capstock.mu) or in writing to Capstock Ltd, Hub 40, French Hub, Grand Baie Coeur de Ville, Grand Baie. If you do not feel that your complaint has been resolved satisfactorily, you may refer your complaint to the Financial Services Commission (FSC). See <https://www.fscmauritius.org/en/consumer-protection/complaints-handling> for further information. If your complaint is about an advisory or discretionary manager acting on your account, please contact the firm providing the service.

### Other relevant information

If there is a time lag between the time you place your order and the moment it is executed, your order may not be executed at the price you expected. Ensure your internet signal strength is sufficient before trading.

The Legal Documents section of our website contains important information regarding your account. You should ensure that you are familiar with all the terms and policies that apply to your account.
